THREE I BOOK INFORMATION

SGT/5721

Vsesoyuznaya astronomicheskaya konferentsiya.

Trudy 14-y Astronomicheskoy-Konferentsii SSSR, Kiyev, 27-30 maya 1958 g.
(Transactions of the 14th Astronomical Conference of the USSR, Held in Kiyev
27-30 May 1958) Moscow, Izd-vo AN SSSR, 1958. 440 p. Date slip inserted.
1000 copies printed.

Sponsoring Agency: Akademiya nauk SSSR. Glavnaya astronomicheskaya observatoriya
(Pulkovo).

Resp. Ed.: M. S. Zverev, Corresponding Member, Academy of Sciences USSR; Ed. of
Publishing House: N. K. Zeychik; Tech. Ed.: R. A. Znamenskaya.

PURPOSE: The book is intended for astronomers and astrophysicists, particularly
those interested in astronomical research.

COVERAGE: This publication presents the Transactions of the 14th Astronomical
Conference of the USSR, held in Kiyev 27-30 May 1958. It includes 27 reports
and 55 scientific papers presented at the plenary meeting of the Conference

Card 2/26

Translation from: Referativnyy zhurnal, Astronomiya i Geodeziya, 1959, Nr 11, p 12, (USSR)

AUTHORS: Zverev, M.S., Timashkova, G.M.

TITLE: The Next Problems of Transit Astrometry

PERIODICAL: Tr. 13-y Astrometr. konferentsii USSR 1956, Moscow-Leningrad, AS USSR, 1958, Nr 35 - 46. Diskus; 46 (res.Engl.)

ABSTRACT: Various studies are enumerated, and the merits of observatories are noted in the field of exact determination of coordinates of stars, observations of the sun, photographic and visual observations of the moon and large planets. The visual observations of bright stars will expediently limit by stellar magnitudes 6.0 - 6^m.5. The weaker stars can be observed better with the help of photographic instruments. The wish is expressed that the catalogue of geodesic stars (CGS), as well as the stars of the FK3 supplement be re-observed. The observatories of the northern hemisphere dealing with observations of the reference weaker stars, for photographic zonal catalogues AGKZ, have started working with success. It is desirable to extend this type of work to the southern hemisphere as well. Special

Card 1/2

68563

The Next Problems of Transit Astrometry

SOV/35-59-11-8777

attention is paid to new programmes of the meridional circles. Two programmes are proposed: listing the latitudinal stars and listing the bright stars. The second programme is being considered in detail in two versions with a limiting magnitude of stars $6^m.0$ and $6^m.5$ with a declination from -10° to $+90^\circ$. To this programme lists of FK3 stars, (as reference stars) FK3 supp; KGZ, list of stars Blau as well as the 2nd and 3rd parts of the list of Parenago (it is expedient to observe the 1st part of the list photographically) are to be added. The total number of stars in the two versions of the programme of bright stars totals about 4,332 and 5,730 stars. Graphs of the distribution of stars over right ascension are cited. The authors give their preference to the first version of the programme. To the afore-mentioned programmes can be added lists of double stars, stars for observing through zenith telescopes and several others. The further development of transit-astrometry, the heightened accuracy of observations and the simplification of the processing will result from mastering a horizontal meridional instrument of the Sukharev or Atkinson type, the introduction into observation practice of modern photo-electric methods and the utilization of a new calculation technique for processing the observations.

Title : Metabolism of Carbohydrates and Content of Mineral Nutrition Elements.

Orig Pub : Uch. zap. Kharkovsk. in-t, 1956, 72, 15-22.

Abstract : The study dealt with changes in the metabolism of the carbohydrates, the content of ascorbic acid and separate elements of mineral nutrition in grafting components of eggplant and tomato and their seminal posterity. In many instances of graftings of eggplants on tomatoes, the leaves of the eggplant show an increased activity of the invertase, while the content of the

N, P and K. In tomatoes grafted on tomatoes the content of all these elements decreases in comparison to the control plants. These same changes repeat themselves also in plants of the seminal posterity of the following seed generations. Graftings of plants of smaller size more vigorous plants (eggplant Delikatess on tomato Marglob), increase the productivity of the graft, as well as the life of its posterity. Grafting of tomato Marglob on eggplant Delikatess can be recommended only for the purpose of increasing the saccharinity of tomato fruits, and in order to reduce its vegetation. -- Rivking.

TITLE: The Influence of the Trace Elements Copper and Cobalt Upon the Content of Nucleic Acids in Potato Leaves (Vliyaniye mikroelementov medi i kobal'ta na sodержaniye nukleino-
vyykh kislot v list'yakh kartofelya)

PERIODICAL: Doklady Akademii nauk SSSR, 1958, Vol. 119, Nr 6, pp.1244-1246 (USSR)

ABSTRACT: Various published data (Refs 1 - 3) show that the lack of sufficient quantities of copper in plants, which grow on soils poor in copper, reduces the crop yield and the resistivity of diseases as a result of some physiological disturbances. The advantageous influence of cobalt upon the yield and quality of the crop was proved (Refs 4 - 6). Nevertheless the part played by trace elements in the physiological and biochemical processes of the organisms has hitherto not been sufficiently well explained. Besides the subject mentioned in the title the author also studied the said influence on the reduced glutathione and upon the catalase activity. A 0,01 m solution of CuSO_4 - and a 0,0001 M CoSO_4 -solution was

Card 1/3

'The Influence of the Trace Elements Copper and Cobalt Upon the Content
of Nucleic Acids in Potato Leaves

20-119-6-53/56

used as micro-fertilizer. The leaves were sprinkled 5 times in such a manner that 40 ml fell to the share of 1 plant. Control plants were sprinkled with distilled water. From table 1 it may be seen that the total phosphorus content of the nucleic acids as well as the phosphorus content of desoxyribonucleic acid increase under the influence of cobalt. Copper had a similar effect. Table 2 shows the influence of cobalt upon cut-off leaves. It retards in some measure the decomposition of nucleic acids and favors a higher content of desoxyribonucleic acid. Table 3 shows the advantageous influence of an additional cobalt food upon the SH-glutathione content and upon catalase activity. CuSO_4 was the optimum for glutathione, but it suppressed the catalase. From the experiments follows that an additional food with the trace elements referred to activates the synthetic processes in the plant. Consequently, the crop yield of the plants increases: by means of cobalt by 15 % more tubers per shrub yielded; by means of copper - by 100 %. There are 3 tables and 8 references, 8 of which are Soviet.

Abstract : Grafts of cuttings of Delikates variety of egg-plants and Marglob variety of tomatos, and the seed progeny of the graftings were objects of investigation. In the leaves of the graftings of tomatos as well as of eggplant deviations (particularly strong during the period of fruit ripening) towards the uncultivated plants were noted, accompanied (considerably greater in the primary phases of development) by a drop in the level of content of protein N,

TITLE: Experiences in the use of relay-type radioactive devices in automat-
ing technological processes at the "Sarkanais Metallurgs" Plant

PERIODICAL: Referativnyy zhurnal. Metallurgiya, no. 12, 1961, 15, abstract
12D105 (V sb. "Radioakt. izotopy i yadern. izlucheniya v nar. kh-ve
SSSR, v. 3", Moscow, Gostoptekhnizdat, 1961, 145)

TEXT: At the Liepaya metallurgical plant a number of operations of tech-
nological processes are being automated with the aid of control equipment manu-
factured by serial production. Automation is based on the use of radioactive
isotopes. The following operations are being automated: control of the automa-
tic removal of the sheet off the finished metal conveyer belt; blocking unit on
cold cutting shears of mill 350; control of the compressor unit operation at the
oxygen station GK-30 (OK-30). The introduction of radioactive automation led to
improved labor conditions and reduced the number of workers. N. Yudina

TITLE:

The Flow of Passengers Grows Incessantly

PERIODICAL:

Grazhdanskaya aviatsiya, 1959, Nr 10, pp 16-17 (USSR)

ABSTRACT:

This is a note on the steady growth of operations of local airlines within the Kirgizskaya SSR. Eleven new routes were opened in 1958, among them the routes Dzhalal-Abad-Alabuka-Karavan (served by the An-2), and Dzhalal-Abad-Osh (served by the An-2 and Yak-12). The turnover of passengers steadily increases. The party and governmental bodies have helped to construct service buildings, roads and communication lines to new airports. The authors disagree with the existing practice of building standard prefabricated houses at new airports. In their opinion, all such houses should be solidly built though standardized. The unclassified airports want only elementary servicing means, such as tank trucks, freight carriers. The An-2 is a good aircraft but its capacity is in-

The Flow of Passengers Grows Incessantly SOV/84-59-10-23/53

sufficient; 2 more seats can be added (according to pilot Tulayev) at the expense of the rack, and by installing a different type of door. Local airlines need helicopters badly for the transportation of passengers to mountainous areas where regular air-fields are scarce. There are 3 photographs.

Title : Serological Diagnosis of Tuberculosis in Domesticated
Birds.

Orig Pub : Ptitsvodstvo, 1958, No 1, 44.

Abstract : On a farm where bird tuberculosis was in evidence, 460
hens were examined by the fast blood-drop method of the
agglutination reaction (FBD; AR). In 41.2 percent of the
hens the reaction was positive, in 18 percent the reaction
was doubtful. Of 11 killed hens which reacted positively
to the FBD AR test, 9 showed typical tubercular changes
in their organisms, and tubercular cultures could be iso-
lated.

TITLE: Deoxidation of steel by aluminum

PERIODICAL: Liteynoye proizvodstvo, no. 6, 1960, 47-48

TEXT: The article reviews the effect of increased Al addition during the final deoxidation of 15 - 25LK (15 - 25LK) steels, cast in ACH-3 (DSN-3) acid lined electric arc furnaces. Tests were carried out at the Dneprodzerzhinskiy zavod imeni gazety "Pravda" (Dneprodzerzhinsk Plant imeni "Pravda" Newspaper). The process included the production and draining off of slags containing 5 - 6% CaO, 50 - 51% SiO₂, 9 - 10% FeO and 20 - 21% MnO. The deoxidation was performed with 13 kg of 70% ferromanganese and 5 - 6 kg of 45% ferrosilicon per ton of liquid steel. The steel was tapped into two ladles and additionally reduced with 1 kg/ton aluminum. The pouring of a 2.3 ton ladle lasted 20 minutes. About 12 - 15% of castings were retested on their plastic properties. Blowhole rejects contained 0.92% of serviceable castings. Microscopic examinations revealed a low ductility of castings enriched with 1 kg Al (see Table), owing to sulfide inclusions at the grain

Card 1/4

Deoxidation of steel by aluminum

S/128/60/000/006/007/007/XX
A104/A133

borders (Figs. 1 a and b). The addition of 1.5 kg/ton Al yielded satisfactory castings and blowhole rejects were reduced to 0.08%. The metallographic inspection showed that an addition of 1.5 kg/ton Al renders the sulfide inclusions annular and isolated from each other (Fig. 2 a) while the pearlite and ferrite structure becomes uniform and free of ferrite ghost (Fig. 2 b). According to Reference 1 [Nekhenzi, Yu. A., Stal'noye lit'ye (Steel Casting), Metallurgizdat, 1948], increased quantities of Al facilitate the formation of Al_2S_3 sulfide which forms no compounds and does not decrease the ductility of metals. Residual Al protects the liquid metal from oxidation during the pouring and prevents blowholes. Greater quantities of Al, proportional to the carbon and silicon content of the metal are recommended. S. R. Mamedov (Ref. 3: "Liteynoye proizvodstvo", no. 12, 1958) quoting Baykov, Nekhenzi, Samarin and Leykin, states that with an increase of Al in steel the content of Al_2O_3 also increases. The authors disapprove this conclusion approving the contrary opinion of S. L. Keyz and K. R. Van Gorn [Ref. 4: Aluminii v chuyune i stali (Aluminum in Cast Iron and Steel), Metallurgizdat, 1959]. There are 2 figures and 1 table.

 and Timchenko, A.I.
 TITLE: Plastic Scintillators with 1,2-diarylethylenes
 PERIODICAL: Pribury i tekhnika eksperimenta, 1960, Nr 1,
 pp 34 - 36 (USSR)
 ABSTRACT: Properties of 1,2-diaryl derivatives of ethylene as
 luminescent additives to plastic scintillators are
 comparatively unknown (Refs 1-3). This is surprising
 because of the good properties reported for
 1,2-di-(1-naphthyl)-ethylene (Ref 4). The present paper
 describes results obtained in an investigation of
 scintillation and luminescence properties of polystyrene
 solutions of three 1,2-diaryl-ethylenes:
 1-phenyl-2-(4-methoxyphenyl)-ethylene (I),
 1-phenyl-2-(4-chlorophenyl)-ethylene (II),
 1-phenyl-2-(4-biphenyl)-ethylene (III).
 The properties of stilbene and 1,2-di-(1-naphthyl)-ethylene
 are also reported. The luminescence spectra were obtained
 with an SF-4 spectrophotometer, used as a monochromator and

Card 1/3

fitted with a photoelectric device (Ref 8); they are
 shown in Figure 1. The scintillation efficiency was
 deduced from the current at the output of a photo-
 multiplier FEU-19. The samples were excited with
 gamma-rays from Ag¹¹⁰ of 0.1 millicurie intensity. It
 was found (Figure 2 and a table on p 36) that the
 scintillation efficiency of a 1% solution of III in
 polystyrene amounts to 147% compared with the efficiency
 (taken as 100%) of a 2% solution of p-terphenyl in
 polystyrene. It was also found that the scintillation
 efficiency of 1,2-diarylethylenes is proportional to
 the photoluminescence yield. There are 2 figures,
 1 table and 8 references, 6 of which are Soviet and
 2 English.

AUTHORS: Malkes, L. Ya. and Timchenko, A. I.

TITLE: Synthesis of trans-p, p'-diphenyl stilbene

PERIODICAL: Zhurnal obshchey khimii, v. 31, no. 2, 1961, 560-562

TEXT: In view of Refs. 1-3 concerning the synthesis of -p, p'-diphenyl stilbene (in the following called DPS), especially of the paper by Ye. Ye. Baroni and G. Bushbek (Ref. 3), the authors obtained only a trans-stilbene in the stilbene synthesis by thermal decomposition of benzalazine. The DPS synthesized in Ref. 3 obviously appeared in the cis-form. The synthesis of DPS by thermal decomposition of p, p'-diphenyl benzalazine was devised on the basis of an attempt of synthesizing trans-stilbene

Card 1/3

89516

S/079/61/031/002/009/019
B118/B208

Synthesis of trans-p,..

(Scheme 1). The initial product was diphenyl from which p-phenyl benzaldehyde (Ref. 5) was obtained. When treating the hydrazine hydrate solution with the solution of p-phenyl benzaldehyde, p, p'-diphenyl benzalazine is formed. By thermal decomposition of the latter, nitrogen separates out, and DPS is obtained whose constants are identical with those of Ref. 2. The high fluorescence of DPS observed both in crystalline and dissolved state, which is also mentioned in Ref. 3, gives rise to the assumption saying that in addition to the principal mass of cis-DPS an impurity of the trans-form was also present. This is confirmed by comparing the absorption spectra in dioxane. The spectrum of DPS obtained in Ref. 3 has, as is shown in the figure, a principal maximum at λ 280 m μ , and a secondary maximum at λ 340 m μ . The spectrum of DPS obtained in the present study shows a distinct band at λ 340 m μ . The empirical formula of DPS being the same in both cases ($C_{26}H_{20}$), it may be assumed that the absorption maximum at λ 280 m μ corresponds to the cis-form, and that at λ 340 m μ , to the trans-form. The secondary maximum at λ 340 m μ in the stilbene of Ref. 3 indicates the co-existence of a trans-form. The appearance of maxima of both forms (at λ 280 m μ and 340 m μ) also obeys the well-known rule (Ref. 6) of the

TITLE: An instrument for automatically measuring partial pressure. Class 42, No. 190630

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 2, 1967, 106

TOPIC TAGS: pressure measurement, electronic measurement, temperature instrument

ABSTRACT: This Author's Certificate introduces an instrument for automatically measuring partial pressure. The installation contains a working chamber, valve, filter, psychrometer, differential electronic bridge and measuring instrument. To provide for measuring aggressive and contaminated vapor-gas mixtures, the working chamber is equipped with a temperature-controlled element connected to the input of the differential electronic bridge. This is electrically coupled to an electronic measurement bridge with a scale graduated according to the thermodynamic characteristics of titanium tetrachloride at normal pressure. This bridge is connected to the differential bridge when the difference between the wet- and dry-bulb thermometer readings reaches zero.
